Quality ProScan Conveyor System Product Spotlight for Washdown Applications featuring ProScan Max® III

The ProScan Conveyor System (featuring the ProScan Max[®] III) metal detector is ideal for wrapped cut meat, portioned seafood, bagged bread, wrapped cheese, frozen hamburger patties, tortillas, chocolates, fresh-cut produce and many more food applications. Advanced Detection Systems' ProScan Conveyor System features the ProScan Max® III patented software and is designed with heavy duty construction welded for washdown applications. Various optional reject and detect devices specific to your unique specifications are available. The ProScan Conveyor System is the most commonly used metal detection system for the food processing and packaging industry. It comes with standard articulated rubber feet or optional stainless steel, locking swivel casters with urethane wheels. Built to provide many years of reliable performance for your applications, the ProScan Conveyor System's motor is watertight with corrosion resistant enclosure seal. The belt is Intralox 1100 Series and ball bearings are stainless steel situated inside polymer housing.

Food processors are encouraged to use Advanced Detection Systems' free product testing service as a perfect way to learn how the ProScan Conveyor System can be used to improve their metal detection investment. Advanced Detection Systems, an engineered driven company will test your product; guarantee ProScan Conveyor System's detection levels and build the metal detector for optimum performance and reliability given the unique characteristics of your specific product.

REJECT DEVICES:

Air Blast w/Discharge

Sweep Arm w/Discharge Bin

Adjustable Side Guides
